Dear Allergist:

Your patient is attending Temple University. We here at Student Health Services will be happy to continue his/her immunotherapy while he/she is in school.

In order to provide the best care for your patient, we will need the following information from your office:

- Immunotherapy vaccine administration schedule
- “Missed shots” schedule
- Guidelines for dose reduction and treatment after a local reaction
- Guidelines for dose reduction and treatment after a systemic reaction
- Indications for when to hold the shot (*e.g.*, fever, *etc.*)

The first injection from a new vial of serum MUST be given by an allergist. If it is not feasible for your patient to return to your office, we can suggest a local allergist whose office will give the first injection from the new vials.

Please have your patient hand-carry all allergy serum to our office. **We will not accept ANY shipped vials, as it cannot be guaranteed they will arrive refrigerated.**

Thank you and we look forward to assisting you in the care of your patient.
